DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-3 and 11-16 are rejected under 35 U.S.C. 102(b) as being anticipated by the Japanese patent 404152676, previously cited.

Regarding claims 1 and 11-16, the Japanese patent discloses, figure 1(j), a thin film transistor containing an active layer 1-7 having convex and concave portions, as can be seen by the enclosed lines of the active layer, in a channel forming region below the gate region 1-11.

Regarding claims 2 and 3, the Japanese patent discloses the number of grain boundaries existing in the channel region is limited to one (see the abstract, lines 5-6)

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 10 and 17 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Japanese patent '676, as applied to claims 1-3 above, and further in view of the Japanese patent 2001028338, newly cited.

The Japanese patent '676 does not disclose the thin film transistor is incorporated in to electronic devices such as camera. The Japanese patent '338 discloses thin film transistor used in digital camera and personal computer (see the second paragraph below the abstract). Therefore, it would have been obvious to one of ordinary skill in the art at the time of the invention to use the thin film transistor in the devices such as cameras so those devices have electronic components with improved characteristics.

Response to Arguments

5. Applicant's arguments filed on 9/5/02 have been fully considered but they are not persuasive.

Applicant argues that the concave and convex portion of the channel region in the application extending in a "channel width" direction, and "perpendicular to a channel length direction".

The examiner notes that in the Japanese patent, figure 1j, the concave and the convex portion both are extending in the channel width direction. Note that the concave and convex portions are also extending in channel length direction, as the concave and convex portions are two-dimensional figure elements that are functions of both horizontal and vertical direction.

Conclusion

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
